

product highlights

Quality Housekeeping Technologies, Inc. is committed to developing cutting edge housekeeping management services. The \$999 Facility Audit is the latest addition to their Quality Audit Program. It is designed

\$999 Audit

to provide you with a quick and affordable snapshot of how the public perceives your facility. For a minimal price, Q.H. Technologies will perform an unbiased, third-party housekeeping inspection with their experienced audit staff. When the inspection is complete, you will receive a quality index and customized reports detailing the findings. You will be provided with a Corrective Action Plan highlighting any deficiencies and suggestions for improvement. Additionally, you will have access to their online results database, allowing you to compare results with similar facilities. With this service, you can ensure your facility is being properly maintained by holding in-house and contracted services accountable. The public's perception of your facilities' cleanliness is invaluable to maintain and further improve customer satisfaction. It's time to make sure you are providing the best possible first impression and it's our job to help!

Rubbermaid Commercial Products (RCP), has introduced its new line of Metal Housekeeping Carts that offer expanded capacity in a compact footprint. These new Metal Housekeeping Carts are the smart solution for hotels and resorts—allowing for increased productivity with its expanded capacity. Cart accessories include the patent-pending removable, mobile 34-gallon fabric bag, which slides-out for increased storage capacity, while also allowing for

the removal of soiled linens or waste while the cart stays in service. The Deluxe High Security Cart can hold enough linens and supplies in a smaller footprint—enough to service up to 18 rooms before returning to the supply closet for restocking.

Webster Industries, a leading manufacturer of recycled content polyethylene trash bags, has announced that the company's ReClaim™ brand and private label trash bags are the first and only trash bags to achieve third-party certification from Scientific Certification Systems (SCS) for state-of-the-art recycled content. Webster is the only plastic trash bag manufacturing company to receive independent certification to

validate and verify the company's recycled content product claims. SCS, originally founded in 1991, is an independent, not-for-profit organization widely considered to be one of the country's leading third-party product claim certification organizations.

Cincinnati-based Hydro Systems announced the launch of its latest mobile integrated cleaning system—the ICS 8950. The new ICS 8950 is specially designed for cleaning professionals who need a quick and accurate means of applying a single cleaning product at multiple dilution ratios. Also available with the ICS 8950 is an extended battery life option, which enables users to significantly extend usage beyond restroom and locker room cleaning to include highly-demanding applications, such as school bus cleaning/sanitizing or staph infection outbreak cleanup where longer operating requirements may be necessary. The new ICS 8950 allows users to take advantage of the emerging trend toward using a single chemical product for multiple applications to quickly and easily “select” the dilution ratio appropriate to the cleaning task. No measuring, handling of chemicals, or taking time to switch bottles and tubes—just turn the dial to one of up to four pre-determined dilution ratio choices and the cleaning and sanitizing chemicals are accurately dosed to the necessary requirement every time. Like the highly popular ICS 8900, the new 8950 provides substantial Green benefits as well.
